Quiz 4

Name:
SSN: xxx-xx-

Instructions: There are totally 1 problems. You must show all of your work to receive a credit for a correct answer. No graphical calculator is allowed in the quiz and exam.

Problem 1. (20 points) Let $\mathbf{A} = \begin{bmatrix} 1 & -1 & 1 \\ 1 & 4 & -4 \\ -1 & 3 & -1 \end{bmatrix}$.

a) Prove that $\mathbf{A}$ is invertible using $\mathbf{L} - \mathbf{U}$ factorization.

Proof: We first do the $\mathbf{L} - \mathbf{U}$ factorization of $\mathbf{A}$.

$$\begin{array}{c} \left[\begin{array}{ccc} & & \end{array} \right] \\ \left[\begin{array}{ccc} 1 & & \\ & & \end{array} \right] \\ \left[\begin{array}{ccc} 1 & & \\ -1 & & \end{array} \right] \end{array} \quad \begin{array}{c} \left[\begin{array}{ccc} 1 & -1 & 1 \\ 1 & 4 & -4 \\ -1 & 3 & -1 \end{array} \right] \\ \left[\begin{array}{ccc} 1 & -1 & 1 \\ 0 & 5 & -5 \\ 0 & 2 & 0 \end{array} \right] \\ \left[\begin{array}{ccc} 1 & -1 & 1 \\ 0 & 5 & -5 \\ 0 & 0 & 2 \end{array} \right] \end{array}$$

So we have

$$\mathbf{L} = \begin{bmatrix} 1 & & & \\ 1 & 1 & & \\ -1 & 2/5 & 1 & \end{bmatrix}, \quad \mathbf{U} = \begin{bmatrix} 1 & -1 & 1 \\ 0 & 5 & -5 \\ 0 & 0 & 2 \end{bmatrix}.$$

Since all diagonal components of $\mathbf{U}$ are non-zero, we conclude that $\mathbf{U}$ is invertible and consequently $\mathbf{A}$ is also invertible.

b) Find $\mathbf{A}^{-1}$.

Solution: The first column of A^{-1} is computed by solving

$$\mathbf{A}\mathbf{x} = \mathbf{e}_1$$

i.e.

$$\begin{bmatrix} 1 & -1 & 1 \\ 1 & 4 & -4 \\ -1 & 3 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}$$

Using the $\mathbf{L} - \mathbf{U}$ factorization found in a), it is easy to get

$$\begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 4/5 \\ 1/2 \\ 7/10 \end{bmatrix} \quad (1)$$

The second column of A^{-1} is computed by solving

$$\begin{bmatrix} 1 & -1 & 1 \\ 1 & 4 & -4 \\ -1 & 3 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix}$$

we again get

$$\begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 1/5 \\ 0 \\ -1/5 \end{bmatrix} \quad (2)$$

The third column of A^{-1} is computed by solving

$$\begin{bmatrix} 1 & -1 & 1 \\ 0 & 2 & -2 \\ -1 & 3 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix}$$

we again get

$$\begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 0 \\ 1/2 \\ 1/2 \end{bmatrix} \quad (3)$$

Finally, we have

$$\mathbf{A}^{-1} = \begin{bmatrix} 4/5 & 1/5 & 0 \\ 1/2 & 0 & 1/2 \\ 7/10 & -1/5 & 1/2 \end{bmatrix}.$$
